

Dog Tracheal Tube

- A special tracheal tube designed for dog.
- This dog tracheal tube is used to deliver anesthetic gas and/or oxygen to patients.
- Designed to sit in the pharynx, and can avoid many problems caused by tubes such as laryngeal and tracheal trauma.

Dog Tracheal Tube

Feature and Benefits

- Suitable for small dogs and adult large dogs
- Easy to place-particularly useful in emergencies
- No airway narrowing, no increase in airway resistance and protect airway from reflux
- Low dead-space connector
- Excellent seal pressure allowing assisted ventilation but no environmental pollution of anesthetic gases
- No tracheal trauma and no laryngeal damage/spasms
- Safer, smoother recoveries and no post-operative gagging or coughing

Step1: Choose the correct tube.

Step2: Use a laryngoscope to examine the mouth and pharynx, then remove any visible foreign objects or excessive secretions.

Step3: Grasp the tongue with a dry gauze to open the mouth and then insert the tube gently into the pharynx (sterile lube can be used on the edges of tube to slide easily).

Step4: Secure the tie gauze around the tube and tie to pet. Lay the pet down and connect the tube to the anesthesia machine.
